Tutorial uso de Hive y SparkQL

Pablo Moreno Quintero

Escuela de Ciencias e Ingeniería, Universidad EAFIT

Pregrado en Ingeniería de Sistemas

Edwin Nelson Montoya Munera 23 de noviembre de 2024

1. Accedemos a Nuestro servicio de HUE

Iniciamos sesión con nuestras credenciales y debemos llegar a la siguiente interfaz

2. Verificar que la información persista en el bucket

Podemos hacer la misma validación mediante ssh con el siguiente comando

Sudo aws s3 ls s3://<nombre bucket>/datasets/onu

```
[hadoop@ip-172-31-12-162 02-mapreduce]$ sudo aws s3 ls s3://labsbucket-pmorenoq/datasets/onu/
2024-11-23 00:15:52 0
2024-11-23 00:16:03 4423 export-data.csv
2024-11-23 00:16:11 9235 hdi-data2.csv
```

hadoop fs -cp s3a://datasetsb/datasets/onu/hdi-data.csv /user/hadoop/datasets/onu/hdi/hdi-data.csv

hadoop fs -cp s3a://datasetsb/datasets/onu/hdi-data.csv /user/hadoop/datasets/onu/hdi/export-data.csv

3. Uso de Hive en HUE

En la barra de búsqueda nos dirigimos al edito de "HIVE"

Debemos ser dirigidos a la siguiente interfaz, donde ingresaremos texto en este campo:

-- Mostrar las bases de datos

SHOW DATABASES;

-- Mostrar las tablas que existen en el momento.

SHOW TABLES;

- -- Crea una nueva tabla llamada "hdilabhive" con las siguientes columnas:
- -- id : Entero que representa el identificador único de cada registro.
- -- country: Cadena de texto que almacena el nombre del país.
- -- hdi : Valor flotante que representa el Índice de Desarrollo Humano (HDI) del país.
- -- lifeex : Entero que representa la expectativa de vida en años.
- -- mysch : Entero que indica los años promedio de escolaridad en la población.
- -- eysch : Entero que representa los años esperados de escolaridad.
- -- gni : Entero que indica el Ingreso Nacional Bruto (GNI) por persona en dólares.

CREATE TABLE hdilabhive (id INT, country STRING, hdi FLOAT, lifeex INT, mysch INT, eysch INT, gni INT)

ROW FORMAT DELIMITED FIELDS TERMINATED BY ",

STORED AS TEXTFILE

-- Mostrar de nuevo las tablas que existen en el momento pare verificar la creación de la tabla 'hdilabhive'.

SHOW TABLES;

Y luego ejecutamos el código

4. Uso de BeeLine para el uso de Hive mediante SSH

Accedemos a nuestro nodo máster mediante ssh y accedemos a la terminal de beeline

```
[hadoop@ip-172-31-12-162 02-mapreduce]$ beeline

Beeline version 3.1.3-amzn-12 by Apacne Hive

beeline> !connect jdbc:hive2://localhost:10000

Connecting to jdbc:hive2://localhost:10000: hadoop

Enter username for jdbc:hive2://localhost:10000: ********

Connected to: Apache Hive (version 3.1.3-amzn-12)

Driver: Hive JDBC (version 3.1.3-amzn-12)

Transaction isolation: TRANSACTION_REPEATABLE_READ

0: jdbc:hive2://localhost:10000> ___
```

Introducimos el mismo Código para visualizar la información

```
hadoop@ip-172-31-12-162:~/st0263-242/bigdata/02-mapreduce

      row selected (0.344 seconds) : jdbc:hive2://localhost:10000>
```

Luego revisamos en HUE la creación de las tablas mediante BeeLine

Agregamos los archivos de nuestro dataset:

hdfs dfs -cp hdfs:///user/hadoop/datasets/onu/hdi/hdi-data.csv hdfs:///user/hive/warehouse/hdilabhive2/hdi-data.csv

Ya podemos realizar operaciones desde beeline o hive.
